LinkedList: FindFirst O(n)

Step 1: loop thru node until match found

```
searchNode = new Node()  →  isHeadSet  →yes→  curNode eq head  →  isCurNodeSet  →yes→  curNode.value eq searchNode.value  →no→  curNode eq curNode.next
```

isHeadSet →no→ return null → End

isCurNodeSet →no→ return null → End

curNode.value eq searchNode.value →yes→ return curNode → End
